

Product Requirement Document (PRD): The Publishers House Website

1. Executive Summary & Objectives

The objective of this project is to develop an institutional, highly functional, and visually compelling web platform for **The Publishers House** church. The website will serve as the primary digital front door for newcomers, a central content hub for active members, and a secure channel for digital giving. The platform will operate under the official domain thepublishershouse.org.

Key Goals

- **Visibility & Onboarding:** Clearly communicate service times, location, and the core beliefs of the church to prospective visitors.
- **Content Delivery:** Provide seamless access to recorded audio/video sermons, articles, and blog updates.
- **Financial Integration:** Enable friction-free tithes, offerings, and special project donations via trusted regional gateways.
- **Operational Foundation:** Build a flexible content management architecture allowing multi-device expansions (e.g., future mobile applications) without duplicating backend systems.

2. Stakeholder Profiles & Workflows

Role	Core Responsibilities	Primary System Requirements
Vibecoder / Core Dev	Rapid prototyping, UI/UX translation to frontend code	Structured, atomic UI patterns, clean component

Role	Core Responsibilities	Primary System Requirements
	using AI generation and components.	styling, semantic HTML/CSS structures.
Mobile / Backend Dev	Database schema definition, CMS configuration, API design, security, and hosting.	Unified database schemas, secure API endpoints, access token generation, headless CMS environments.
UI Designer	Visual layout creation, responsive wireframes, asset management, and typography alignment.	Complete sitemap definitions, precise asset checklists, dynamic spacing and layout guidelines.
Media Personnel	Content creation, high-res asset uploads, video streaming management, audio optimization.	Frictionless asset pipelines, straightforward CMS upload forms, explicit file size/format constraints.
Pastor / Leadership	Information accuracy, theological vetting, content policy confirmation.	Simple content staging environments or draft approval mechanics.

3. Information Architecture & Sitemap

The website will follow a strictly decoupled, highly scannable layout to maximize engagement on desktop and mobile web viewports alike.

- **Homepage:** Live stream banner component, service schedule, latest sermon card, upcoming events banner, greeting section.
- **About Us:** Our vision, core values, beliefs, and a leadership section featuring structured professional portraits.

- **Sermons Hub:** Categorized archive of past teachings with options for integrated audio playbacks, video embed redirects, and study guide attachments.
- **Articles & Blogs:** Chronological grid of text-based resources, search functionality, and category filters (e.g., Faith, Devotionals, Family).
- **Donations / Giving:** Secure, isolated checkout page supporting localized single and recurring payment mechanisms.
- **Events:** Calendar or sequential cards showcasing upcoming conferences, church projects, and special services.
- **Contact Us:** Location maps embed, digital contact form, official phone numbers, and social media handles.

4. Detailed Functional Requirements

4.1 Content Management System (CMS) & Data Archiving

All content fields must remain highly structured to support future consumption by native applications. Free-form text fields must use standard rich text blocks or Markdown fields.

- **Sermon Collections:** Every entry must record: Title, Speaker Name, Date Preached, YouTube/Vimeo URL, Audio File URL (MP3), and Study Guide Attachment URL (PDF).
- **Event Entries:** Every entry must record: Title, Event Date & Start/End Time, Venue details, Cover Image, Description, and Optional Registration Link.

4.2 Payment Gateway Integration

The donation layout must provide smooth user inputs while transferring payment card processing to secure PCI-DSS compliant regional infrastructure.

- User selectable preset giving categories: Tithe, Offering, Special Project, Thanksgiving.
- Seamless modal checkout or secure off-site redirection utilizing Flutterwave or Paystack API setups.
- Automated webhook tracking to trigger transactional confirmation emails upon successful checkout events.

5. Non-Functional Requirements

- **Global Performance:** Content delivery must be accelerated globally utilizing Cloudflare edge routing and proxy mechanisms. Target page load times must be under 2.0 seconds globally.

- **Security and SSL:** Full strict TLS/SSL configurations via Cloudflare certificate management. All direct API interactions must run exclusively over HTTPS.
- **Mobile Responsiveness:** Complete layout parity across viewport dimensions ranging from 320px up to ultra-wide desktop monitors. Flexbox and CSS grid layouts are mandatory.
